

Executive Summary :

Problem Statement -

PulsePoint users sign up to build consistent fitness habits, but most of them stop using the app within the first two weeks. Our churn is way higher than what's normal for fitness apps. Our app store ratings have also been dropping over the last couple of quarters, and users keep saying the app feels outdated and doesn't keep them motivated. Because of this, fewer new people are downloading the app too. If we don't fix this, we risk falling behind apps like Strava and Whoop.

Goals and What are my non-goals -

a. Goals

- i. Get more users to stick around past the first two weeks instead of dropping off
- ii. Improve our app store rating by fixing the main complaints, mainly the lack of motivation and the outdated feel
- iii. Get organic downloads growing again instead of declining

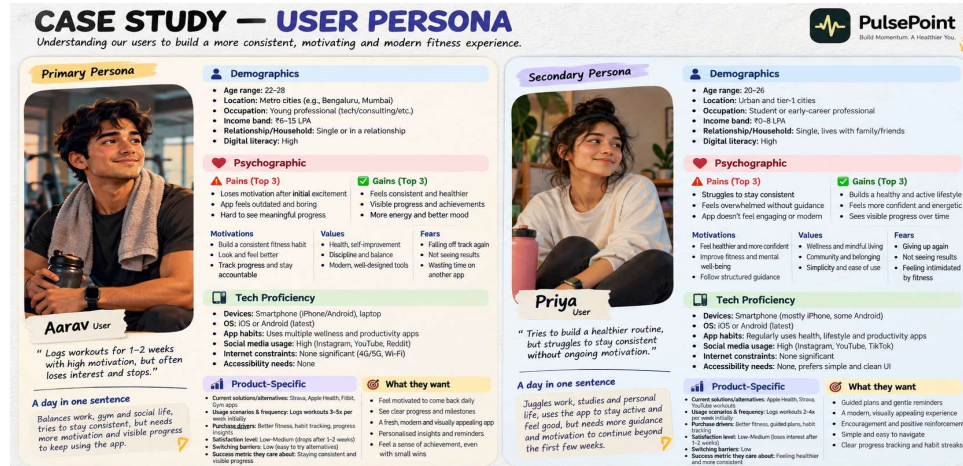

b. Non-goals

- i. Not changing how workout logging works right now, just focusing on why people leave
- ii. Not touching pricing or monetization in this version
- iii. Not building full social features like leaderboards or friend feeds yet, just enough to keep users motivated and show their progress

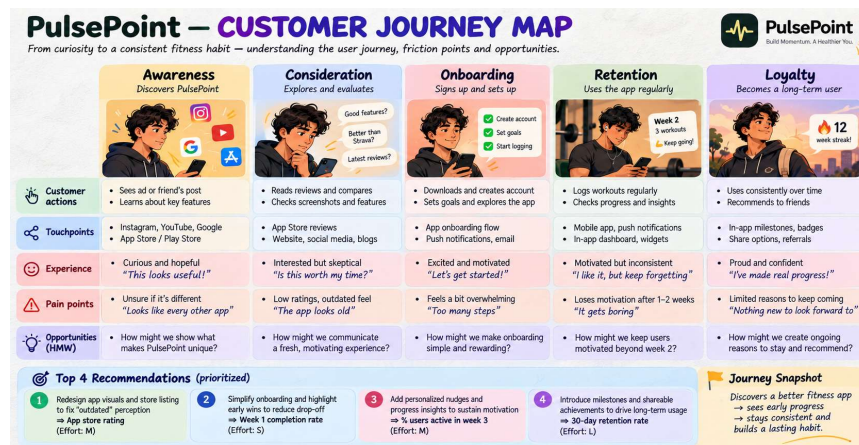

Success metric

- a. **North Star** - % of users who log at least one workout in week 3
- b. **L1** - App store rating
- c. **Counter** - Average session length per visit

User Persona

User Journey

What is the competitor Offering:

AI Progress Insights — Turns a user's logged workout history into a plain-language summary of their progress, so improvement is felt, not just recorded.

Daily Recommendation + Reasoning — Gives the user one specific action to take each day, along with a short reason why, removing the "what do I do today" decision point.

Streaks / Milestone Sharing — Tracks and visibly displays workout consistency (e.g., a streak counter), with an option to share a milestone, giving users a reason to return even on low-motivation days.

Feature	Reach	Intent	Confidence	Effort	Rice Score	Priority
AI Progress Insights	40,000	2	0.8	3	21,333	2
Daily Recommendation + Reasoning	50,000	3	0.7	4	26,250	1
Streaks / Milestone Sharing	35,000	1	0.9	2	15,750	3

Functional Requirements

- Generate plain-language progress summaries from previous activity logs.
- Provide actionable daily guidance paired with clear rationale.
- Display active workout streaks and celebrate key achievements.
- Allow users to customize push alert preferences easily.

Non-Functional Requirements

- **Performance:** Core application views must render rapidly.
- **Reliability:** Ensure exercise records remain dependable and accessible.
- **Security:** Safely encrypt and protect user personal metrics.
- **Usability:** Keep interface flows simple and effortless to navigate.
- **Accessibility:** Maintain readable typography and accessible touch elements.
